

International GT Medical Examination Form
Racing Competition License

Please email completed for to: Julie Bentley (770)380-7770 | Julie@InternationalGT.net

Dear Physician;

You are being asked to examine this applicant for the purpose of obtaining competition racing privileges. This exam should concentrate on conditions and disease processes that could lead to injury or even the death of the applicant during high speed driving at a competition racing event and possibility to put others at risk who are participating in, working at or attending such event.

From a physical point, a driver must have:

- 1. Musculoskeletal integrity – physical ability to rapidly operate the mechanical systems of the race car (assist devices allowed on case-by-case basis).
2. The ability to evacuate or exit a race car quickly without outside assistance.
3. Good vision – distant vision, depth perception, ability to distinguish basic colors (red, green, yellow, blue and black flags are used to signal drivers when on the race course) and peripheral vision in the horizontal median for each eye.
4. Good general health – minimal chance of sudden incapacitation from any disease or from drug therapy for an on-going treatment of stable chronic disease.
5. Mental acuity – the ability for rapid mental activity and problem solving.

The applicant must be able to operate a race car in an environment which may contain:

- 1. High heat (temperatures in race cars may exceed 20-30 degrees over ambient)
2. Presence of fumes, noxious vapors and dust
3. Very loud noise levels, high G forces and vibration
4. Risk of collision, impact, flying debris and fire

With the above listed requirements and conditions in mind, special consideration should be given by the physician during your examination to the applicant who has any of the following conditions: loss of extremity, high blood pressure, psychological problems, alcohol or drug abuse, cardiac disease, neurological problems, diabetes, asthma, epilepsy, history of heart attack, loss of color vision, ongoing drug therapy, spasmodic, COPD, stroke hx with sequel.

Cardiac Examination: Baseline EKG is required with the first physical examination upon reaching age 40. If applicant starts racing after 40, baseline EKG is required at the time of the first physical exam. After age 50, a stress EKG (treadmill) is strongly recommended with every other physical exam. The examining physician may require an EKG or stress EKG at any age depending on history and physical examination findings.

Physician: This applicant should have no established medical history or clinical diagnosis that may reasonably be expected within one (1) year finding, to make him/her unable to perform the duties as described above. On the basis of my physical examination of this applicant and mindful of the above note addressed to me, I make the following recommendation that the applicant is physically and psychologically fit to drive a racing car in competitive events at high speeds.

Examining Physician's Signature: _____ Date _____ Phone _____

Examining Physician's Name: _____ Email: _____

Address: _____
Please print or use address stamp

Applicant's Signature: _____ Date _____

Printed Name: _____ Email _____

Physician may be contacted to verify the above information. Falsification of any signatures or dates on this document will result in an immediate ban of the applicant from IGT.
